Question **1**

Correct

The name and mileage of certain cars is passed as the input. The format is CARNAME@MILEAGE and the input is as a single line, with each car information separated by a space. The program must print the car with the lowest mileage. (Assume no two cars will have the lowest mileage)

Input Format:

The first line contains the CARNAME@MILEAGE separated by a space.

Output Format:

The first line contains the name of the car with the lowest mileage.

Boundary Conditions:

The length of the input string is between 4 to 10000.

The length of the car name is from 1 to 50.

Example Input/Output 1:

Input:

Zantro@16.15 Zity@12.5 Gamry@9.8

Output:

Gamry

For example:

Input	Result
Zantro@16.15 Zity@12.5 Gamry@9.8	Gamry

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 #include<string.h>
3 #include<stdlib.h>
4 int main(){
5     char input [10000];
6     fgets(input, sizeof(input), stdin);
7
8     char *token;
9     char lowestCar[100];
10    double lowestMileage = 9999999.0;
```

```

11
12 token = strtok(input, " ");
13 while(token !=NULL) {
14     char carname[100];
15     double mileage;
16
17     char *atsign = strchr(token, '@');
18     if (atsign !=NULL) {
19
20         *atsign = '\0';
21         strcpy(carname, token);
22         mileage = atof(atsign + 1);
23
24         if(mileage < lowestMileage) {
25             lowestMileage = mileage;
26             strcpy(lowestCar, carname);
27         }
28     }
29     token= strtok(NULL, " ");
30 }
31 printf("%s", lowestCar);
32 return 0;
33 }
34
35
36
37
38

```

	Input	Expected	Got	
✓	Zantro@16.15 Zity@12.5 Gamry@9.8	Gamry	Gamry	✓

Passed all tests! ✓

Question **2**

Correct

A certain number of people attended a meeting which was to begin at 10:00 am on a given day. The arrival time in HH:MM format of those who attended the meeting is passed as the input in a single line, with each arrival time by a space. The program must print the count of people who came late (after 10:00 am) to the meeting.

Input Format:

The first line contains the arrival time separated by a space.

Output Format:

The first line contains the count of late comers.

Boundary Conditions:

The length of the input string is between 4 to 10000.

The time HH:MM will be in 24 hour format (HH is hours and MM is minutes).

Example Input/Output 1:

Input:

10:00 9:55 10:02 9:45 11:00

Output:

2

Explanation:

The 2 people were those who came at 10:02 and 11:00

For example:

Input	Result
10:00 9:55 10:02 9:45 11:00	2

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2
3  int main ()
4  {
```

```
4  ▼ {  
5      int h,m,ct=0;  
6      char sp;  
7      do  
8  ▼  {  
9          scanf("%d:%d",&h,&m);  
10         scanf("%c",&sp);  
11         if(h>10 || (h>=10&&m>00))  
12  ▼     {  
13             ct++;  
14         }  
15     }while(sp==32);  
16     printf("%d",ct);  
17     return 0;  
18 }
```

	Input	Expected	Got	
✓	10:00 9:55 10:02 9:45 11:00	2	2	✓

Passed all tests! ✓

Question **3**

Correct

A single line consisting of a set of integers, each separated by space is passed as input to the program. The program must print the sum of all the integers present.

Input Format:

The first line contains the integer values (Each separated by a space)

Output Format:

The first line contains the sum of all the integers.

Boundary Conditions:

The length of the input string is between 3 to 10000

The value of the integer values will be from -99999 to 99999

Example Input/Output 1:

Input:

100 -99 98 5

Output:

104

Example Input/Output 2:

Input:

100 200 -300 500 -450 -50

Output:

0

For example:

Input	Result
100 -99 98 5	104

Input	Result
100 200 -300 500 -450 -50	0

Answer: (penalty regime: 0 %)

```

1  #include<stdio.h>
2
3  int main()
4  {
5      int n,sum=0;
6      char sp;
7      do
8      {
9          scanf("%d",&n);
10         scanf("%c",&sp);
11         sum=sum+n;
12     }while(sp==32);
13     printf("%d",sum);
14     return 0;
15 }
```

	Input	Expected	Got	
✓	100 -99 98 5	104	104	✓
✓	100 200 -300 500 -450 -50	0	0	✓
